

plant hire.

Epitome Plant Hire, a subsidiary of the Epitome Group, was established in 2013 with the objective of providing contractors with earthmoving equipment in order to assist them in their service delivery targets.

Epitome Plant Hire has, in partnership with Epitome Consulting, developed a keen interest in SMME development. In pursuit of this objective, Epitome Plant Hire makes available to SMMEs plant equipment at competitive rates and with specialised support. That support includes a mentorship programme for the SMME on how to source, operate, manage and care for the equipment they are hiring.

We stock the very latest in cutting-edge plant machinery, including a hydraulic tracked excavator and TLB backhoe loader.

Both these machines are suited to a range of earthworks challenges, making them ideal for infrastructure development projects, no matter how big or small.

Let us assist you on your next earthworks project.

FOR MAJOR EARTHWORKS

Our Sumitomo hydraulic tracked excavator is suited to a range of heavy-duty earthworks. Its progressive features include:

- Stronger boom and dipper arm (2.4m)
- Extra durable bucket (1.1m³)
- Improved undercarriage
- High rigidity cabin structure
- Optimised view from cabin for improved safety

This outstanding machine also complies with new international emissions regulations, while its advanced low-noise design is in line with current EU noise regulations.

It offers a range of unparalleled benefits, including:

- Real digging power as a result of its improved hydraulic system and larger arm cylinder
- Unique Speed Priority mode, for increased productivity and enhanced fuel efficiency
- Automatic Power Boost – another original Sumitomo feature that increases digging power in quick response to working conditions during heavy duty digging work
- Quick and smooth control response

VERSATILE WORKHORSE

Our Terex backhoe loader offers not only the power and control of comparable machines, but also the ability to power a range of attachments including sweepers, mixers, post augers and planters. With its proven performance, strength and fine control, the backhoe provides an ideal host for hammers, augers, cutting units, planers and compactors. Features include:

- The latest Tier 2 engines with increased horse power and performance
- New front axles, larger torque convertor, power boosted brakes and a new 4-wheel steering system
- Ergonomically positioned controls and consoles
- The transport lock combines boom and swing, and is operated from within the cab for improved convenience and safety

It offers a number of unique benefits, including:

- Reduced noise levels and smoke emissions
- Enhanced operating performance and reliability
- The backhoe combines power and performance with control and feel, and allows the operator to carry out even the most arduous of tasks with ease
- The design incorporates a single cylinder loader to provide excellent visibility to the bucket and plenty of breakout power for even the toughest conditions
